iLet GLUCOSE TARGET SETTING

☐ Usual ☐ Higher

Certified iLet Trainer may adjust glucose target at initial follow up calls: ☐ Yes ☐ No

Note for HCPs: Most patients should start using the iLet at the "Usual" glucose target. Consider starting on the "Higher" glucose target ONLY for those who have a higher A1c (e.g., > 10%), are transitioning from a long-acting insulin, or have very low insulin requirements.
***For patients with higher A1cs or transitioning from long-acting insulin, consider target reduction to "Usual" after the first few days of iLet therapy. ***

PRESCRIBER'S ORDERS FOR MANAGEMENT OF HYPERGLYCEMIA AND KETONES

Because the iLet determines all doses of insulin, the management of ketosis is different when using the iLet as compared to other insulin pumps, including hybrid closed-loop systems.

The iLet Bionic Pancreas System comes with a recommended ketone action plan. Review the plan below and indicate the patient should follow the instructions as written or provide alternative recommendations in the section below. The certified iLet trainer will review these recommendations with the patient during the iLet training and initiation visit.
